

Automotive **Retail** Group presents CVR

Increase Productivity. Increase Profitability

With Computer Vehicle Registration's (CVR) Centerpointe solution you can now increase the productivity of your dealership, improve customer satisfaction, and enhance profitability. DMS@NET will link your sold deal information to the CVR system for your state with just a click of a button. Upon capping your deal, you can export your deal information to CVR and handle all your DMV needs. CenterPointe connects dealers directly to the DMV system via a secure, high speed, reliable network. This unique access provides a number of benefits not currently available with conventional title & registration methods:

- Inquire DMV records on trade-in vehicles and validate ownership, registration status, liens, registration stops, and/or branding (availability may vary based on individual states).
- Automate the title & registration process which reduces costly errors on titles, fee calculations, and incorrect registrations.
- Avoid rekeying of customer vehicle, and lienholder information on title & registration documents through the F&I interface from DMS@NET.
- Eliminate "blank checks" issued for title & registration processing through electronic movement of all applicable DMV fees.
- Increase profitability with dealer compensation – recover the complete cost of title & registration processing and generate additional profits for your dealership (may vary based on parameters allowed by the individual states).

IMPROVED CUSTOMER SATISFACTION

Centerpointe enables the dealership to become a one-stop shop for purchasing of an automobile. The current process forces customers to return to the dealership to receive their registration, plates, and decals. With Centerpointe your customers have the convenience of driving off the lot with a fully registered vehicle. This significantly enhances customers satisfaction.

THE LEADER IN ELECTRONIC TRANSACTIONS TO THE DMV

Computerized Vehicle Registration (CVR) is a general partnership between ADP Dealer Services and the Reynolds and Reynolds Company. CVR was formed in 1992 and is dedicated to develop and administer secure systems to transmit electronic transactions to and from State Departments of Motor Vehicles. With its solid experience and financial strength and stability, CVR provides a commitment to the automotive marketplace that cannot be duplicated by any other organization. CVR processes nearly 2 million vehicle transfers and 3.5 million secured DMV inquiries annually. CVR supports programs in North Carolina, California, Florida, Virginia, Maryland, Massachusetts, New Jersey, Wisconsin, Arkansas, Oregon, Illinois, Idaho, South Carolina, Connecticut, West Virginia, Delaware, Michigan, and Pennsylvania. Note: CVR Integration is only supported for customers using AS/400 OS V4R2 or higher.
