

SELL TRUCKS, PARTS AND SERVICE PROFITABLY.™

ADP's Rugged Mobile PC

Rugged Mobile PC is part of ADP's WorkStation Services.

WorkStation Services provides the solutions your dealership needs to reduce the cost and headache of managing and supporting PC-based WorkStations.

If you have any questions concerning ADP's Rugged Mobile PC or any other ADP Network Solution, please call us at 1-888-424-6342 or visit us at www.DealerSuite.com.

ADP Delivers Wireless PC Technology That Takes on the Extreme Duties in the Service Area of the Dealership

The average service department is responsible for a significant percentage of the dealership gross profit. Delivering this additional profit can only be achieved by providing superior customer service while simultaneously maintaining a high level of efficiency and production. ADP's Rugged Mobile PCs support the key applications and information so you can access customer service histories, repair order invoices, and manufacturers' technical updates to solve problems immediately, so constantly walking back and forth between computer terminals and service bays becomes unnecessary.

Durability

ADP's Rugged Mobile PCs are built with unmatched durability. The Rugged Mobile PC is built to endure stringent testing procedures that measure for dust, water, vibration, extreme temperature and moisture resistance, as well as drop shock absorption. This makes them the PC solution that's tough enough to handle diverse applications as well as the rigors of managing a dealership service operation.

Mobility

Rugged Mobile PCs are easy to carry throughout the service area or even the dealer lot. Technicians can take it right under the hood to compare OEM web based wiring diagrams to fix the vehicle right the first time. Rugged Mobile PC has a built-in handle for convenient portability, weighs less than 4 pounds, and can work up to 300 ft. from any wireless LAN, delivering unsurpassed mobility.

Versatility

Rugged Mobile PC's unique set of features allow a host of uses throughout the dealership. It can be used as by Service Technicians during the week, Parts Counter Staff in the evenings, and Sales Representatives on the weekends.

Consider these benefits:

- Accelerate billing cycles and revenue generation with a single electronic entry of information from any point within the dealership.
- Reduce errors and delays caused by the re-entry of information from handwritten forms.
- Improve productivity by managing service issues immediately and on the spot.
- Save computer purchase and maintenance costs by using a PC that can withstand the rigors of mobile computing without normal breakdowns or crashes.
